AGENDA

01

What “Shared PC” really means in Windows 11

02

Key design decisions before touching Intune

03

Building a Shared PC blueprint with Intune

04

App delivery on Shared PCs

05

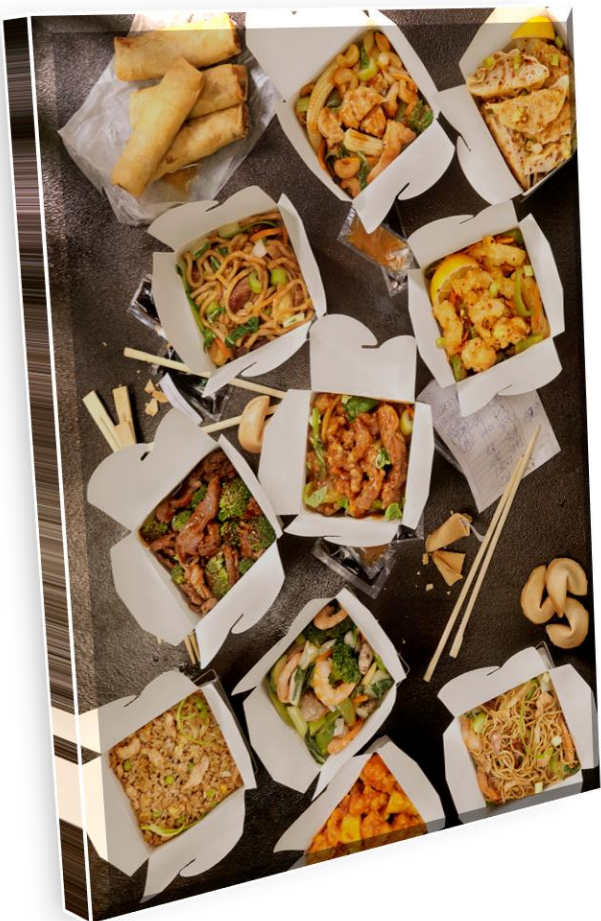

Security that supports low-touch operations

06

Operational lessons & troubleshooting patterns

Key Takeaways

- Understand how to **design Windows 11 Shared PCs properly**
- Have a **reusable Intune blueprint** for shared environments
- Know how to keep Shared PCs **secure, fast, and low-touch**
- Avoid common mistakes with apps, profiles, and policies
- Confidently choose Shared PC over kiosk mode when appropriate

01 - What “Shared PC” really means in Windows 11

What this session is (and is not)

- ✓ Windows 11 Shared PCs
- ✓ Multiple users, full Windows experience
- ✗ Not kiosk mode
- ✗ Not single-app lockdown

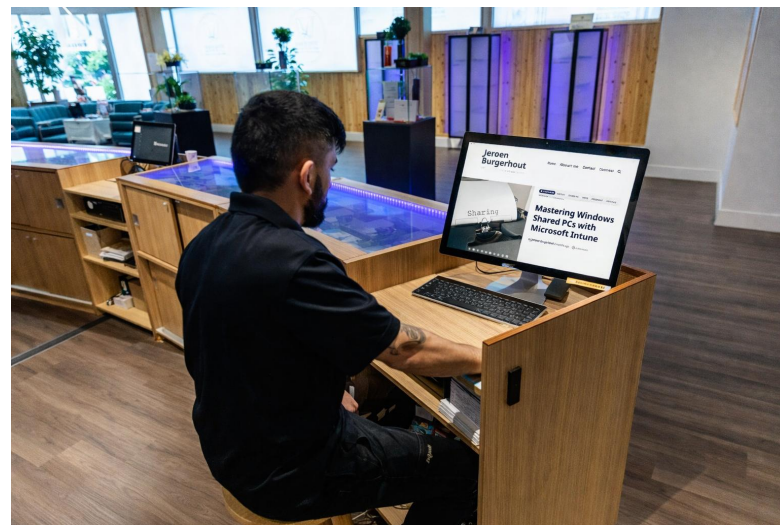

What is a Shared PC really

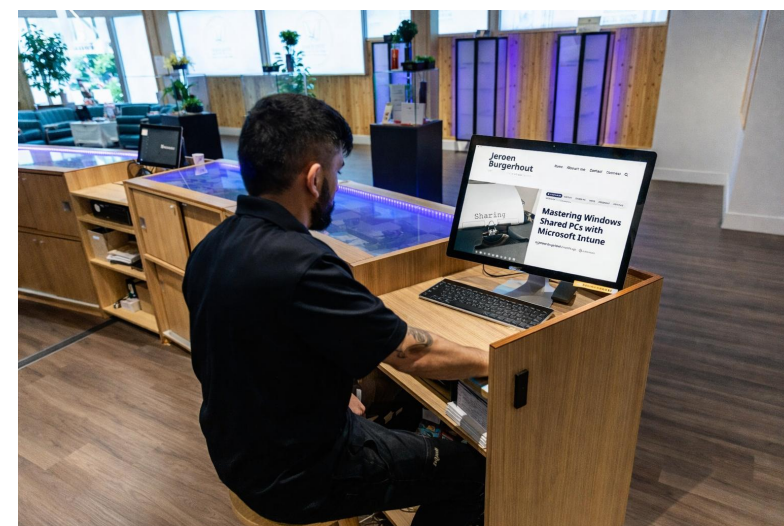

Common Shared PC scenarios

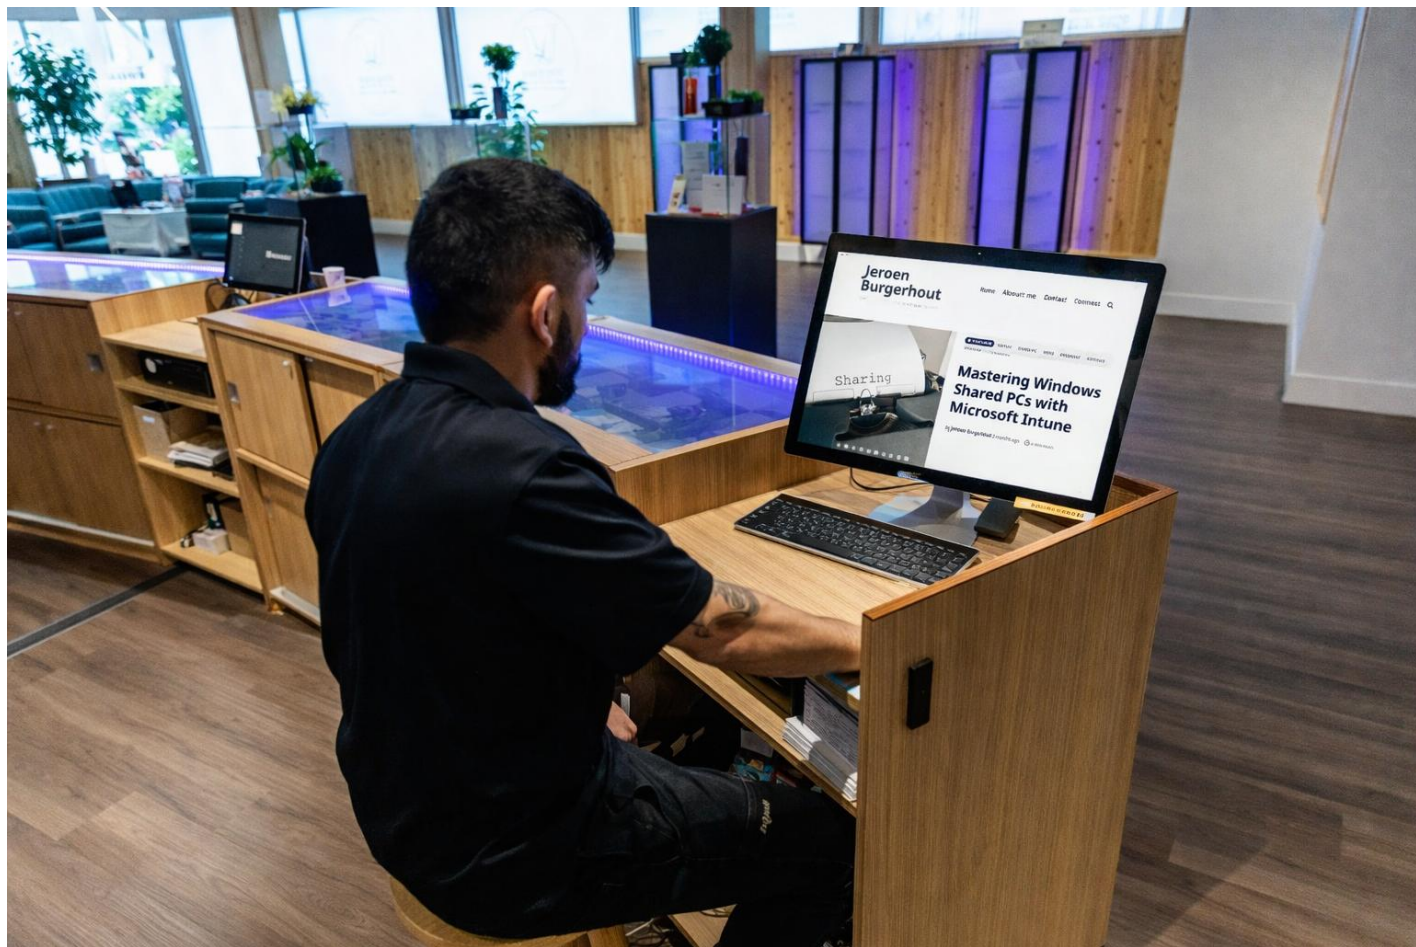

Common Shared PC scenarios

Common Shared PC scenarios

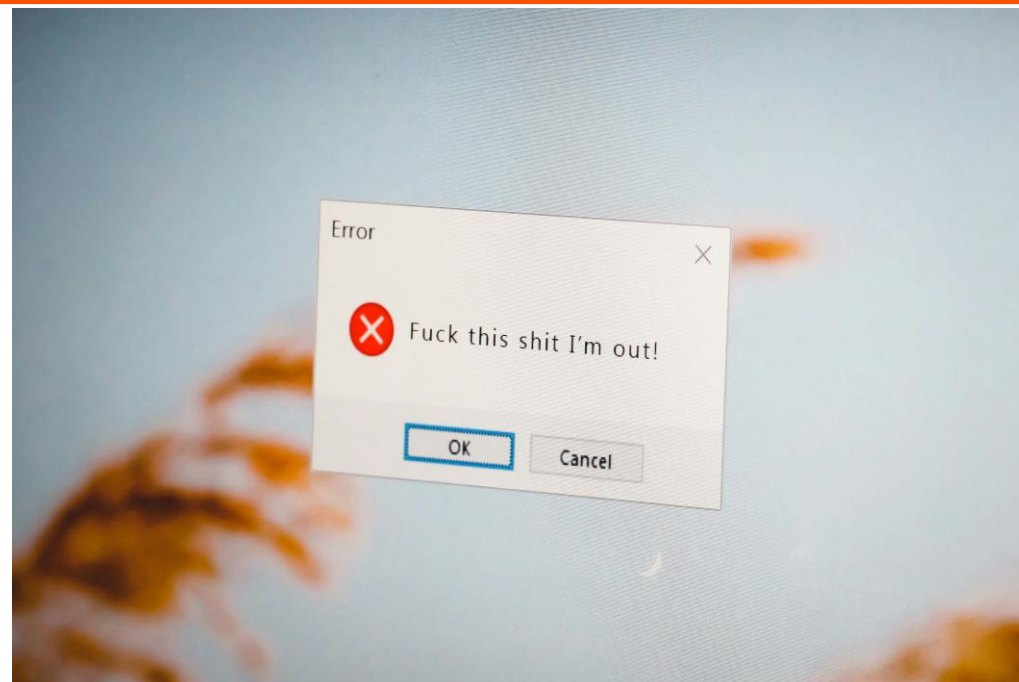

02 - Key design decisions before touching Intune

Why Shared PCs fail

- Profile sprawl
- Disk fills up
- Per-user app installs
- Over-scoped policies

Design decisions before Intune

- Identity model
- User expectations
- Device ownership
- Assignment strategy

Sign-in & identity choices

- Entra ID users vs local users
- MFA
- Conditional Access
- Session speed vs security

03 - Building a Shared PC blueprint with Intune

The Shared PC blueprint in Intune

- Shared PC configuration profile
- Profile cleanup behavior
- Storage thresholds

Performance & user experience

- Start & Taskbar consistency
- Disable personalization drift
- Fast logon, fast logoff

DEMO: Shared PC configuration profile

04 - App delivery on Shared PCs

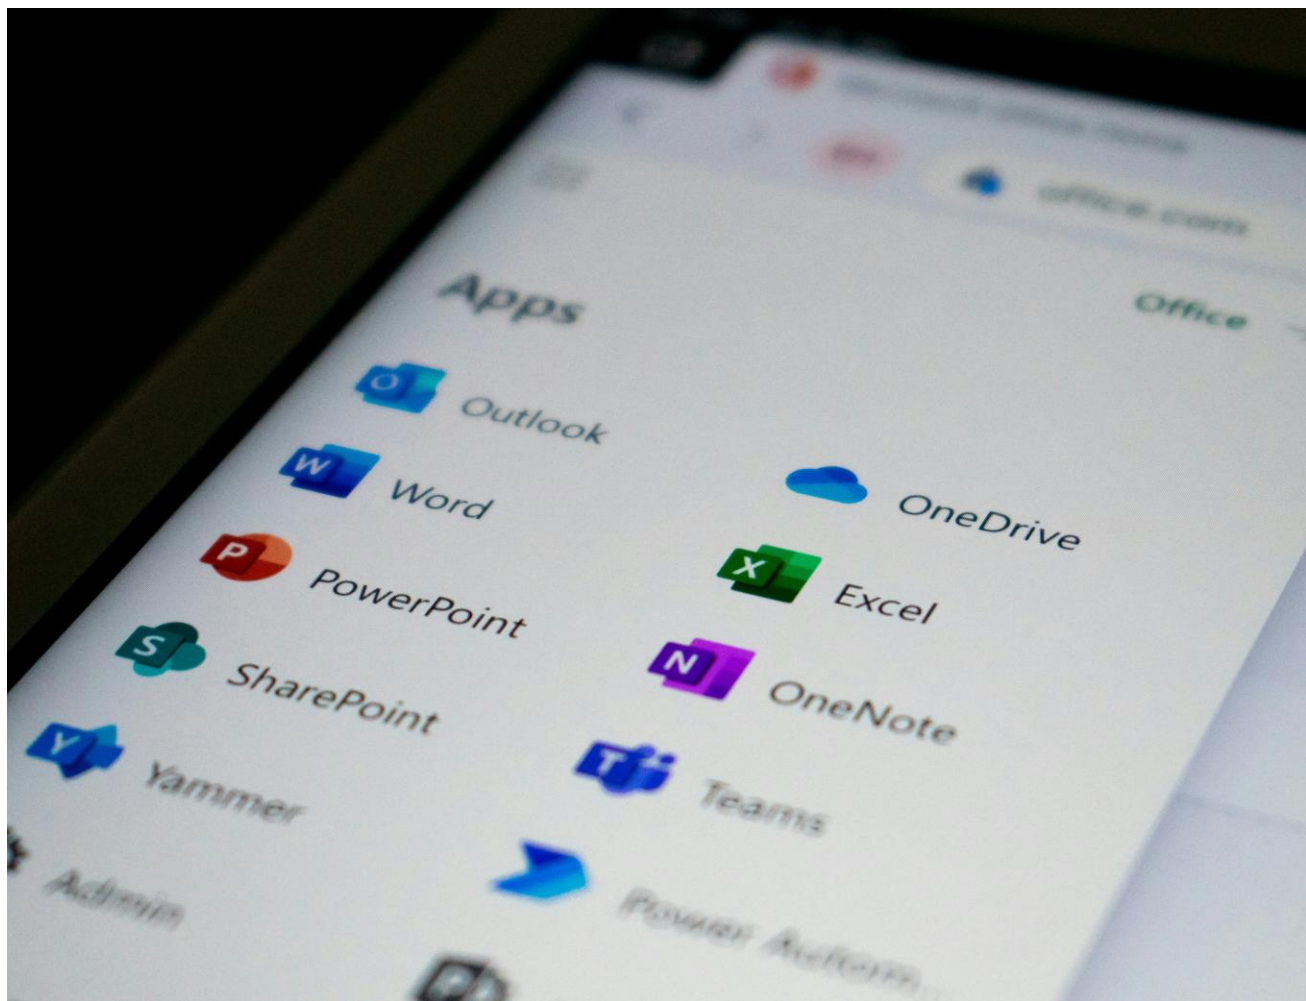

App delivery on Shared PCs

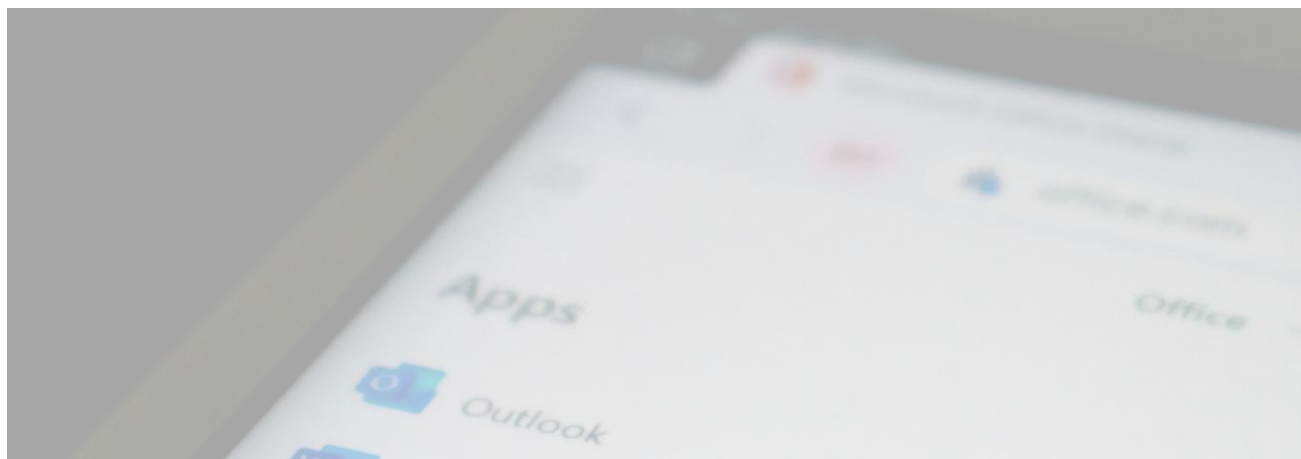

Microsoft 365 Apps on Shared PCs

```
1 <Configuration ID="2dd0d5c0-3d98-4ddf-ab9f-48d871857115">
2   <Add OfficeClientEdition="64" Channel="MonthlyEnterprise" MigrateArch="TRUE">
3     <Product ID="O365ProPlusRetail">

DEMO: Microsoft 365 Shared XML

05 - Security that supports low-touch operations

Security without breaking usability

- Shared PCs amplify friction
- Secure defaults, not maximum lockdown
- Design for many users per day
- Prevent incidents, don't slow everyone down
- Defender on Shared PC
- Local admin strategy (LAPS)
- Conditional Access: necessary, but carefully

Windows Hello for Business??

- Password-based logins supported
- ~~Windows Hello for Business:~~
 - ~~PIN~~
 - ~~Finger~~
 - ~~Face~~
- Web Sign-in

Windows Hello for Business??

DEMO: Shared PC in action

Welcome! Let's get you set up for work.

This may take a while, but leave everything to us.
Please don't turn off this device.

06 - Operational lessons & troubleshooting patterns

Operational reality

- Treat Shared PCs like cattle, not pets
- Measure device health, not user happiness
- Recovery beats repair
- Stability > customization

Troubleshooting patterns

- Slow sign-in $\neq$ performance issue
- Disk pressure is the silent killer
- App issues are usually state-related
- Policy conflicts hide in scope

Mastering Windows Shared PCs with Microsoft Intune

by Jeroen Burgerhout 3 months ago ⌚ 6 MIN READ

Shared PCs are a perfect fit for frontline, education, or shift-based environments — where devices are used by multiple users throughout the day. But managing them right requires the right balance between security,
